SUMMARY

MEMOFIX™ SUTURE ANCHOR

- MEMOFIX™ SURGICAL TECHNIQUE 3
- IMPLANTS 4

SURGICAL TECHNIQUE

MEMOFIX™

MEMOFIX™ system

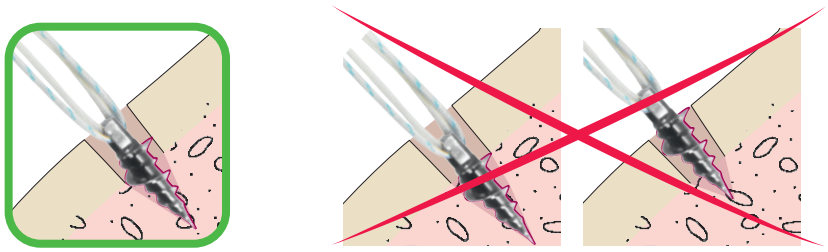
- The MEMOFIX™ system was designed to reattach soft tissues (tendon or ligament) to bone.
- Each anchor is supplied on an implant holder.

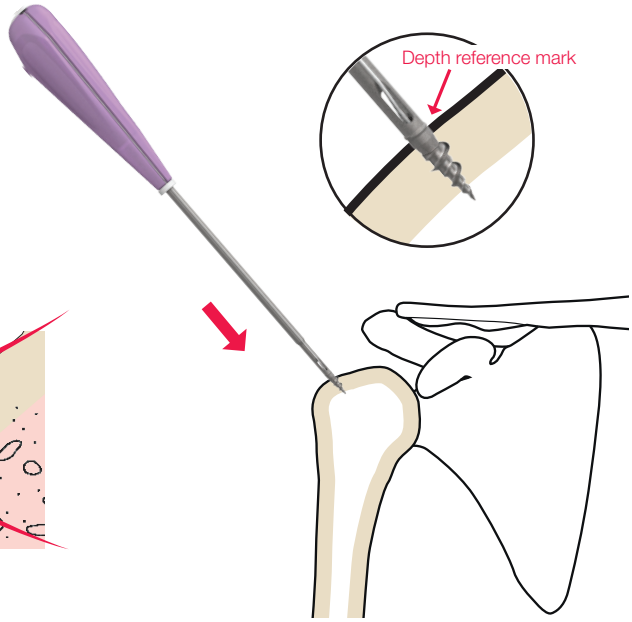
Planning

- Plan the position of the anchor near the soft tissues being reattached.
- For an effective hold, the anchor must cross one bone cortex (monocortical hold).
- MEMOFIX™ anchors are self-drilling and self-tapping, however, pre-drilling may be necessary to insert the MN5 anchor into a hard cortical bone with a drill Ø2.5mm.

Placement of implant

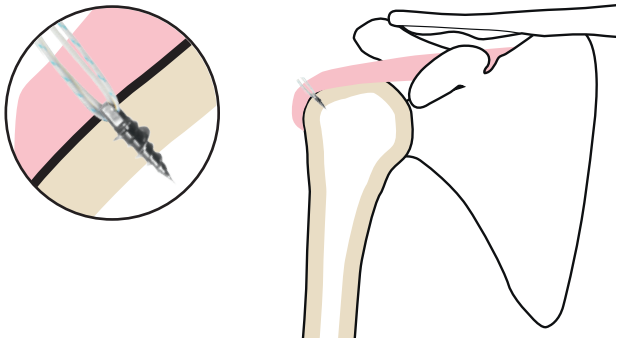
- Using the implant holder, screw the anchor until the depth mark is reached.
- Release the sutures and needles from the implant holder.
- Check the anchor's hold in the bone. Make sure the suture slides in the eyelet and that it does not get cut on a sharp bone edge.





Suture

- Reattach the soft tissues using one (or more) of the suture/needle combinations, then knot them to bring the soft tissues as close as possible to the anchor. Finish by tightening the suture knots.
- Depending on the size of the tissue fragment being repaired, several anchors may be needed to ensure effective reattachment.



Removal

In the event of required ablation, the anchor can be unscrewed using the holding device of a same size of anchor and the suture can be cut using the standard instrumentation available in the operating room.

MEMOFIX™

COMPONENTS

MEMOFIX™ screwed anchor

DESIGNATION	REF
SCREWED ANCHOR Ø2 WIRE Ø0.35	MN2
SCREWED ANCHOR Ø3 WIRE Ø0.35	MN3
SCREWED ANCHOR Ø3 WIRE Ø0.6	MN3GF
SCREWED ANCHOR Ø4 WIRE Ø0.6	MN4
SCREWED ANCHOR Ø5 WIRE Ø0.6	MN5
