

Enhanced Home Recovery

Recover from your surgery in the comfort of your own bed with the HomeFoam version of our Ortholove® Professional Series SRE (Swelling Reduction Elevator).

Reducing postoperative swelling enhances healing and recovery and our beautifully designed HomeFoam is recommended by expert surgeons to keep your foot at the perfect height whilst relieving stresses on your knee, hip and lower back.

Specifically Designed to Help with YOUR Recovery

Designed by leading surgeons, the Ortholove® HomeFoam elevator is the perfect height to reduce post operative swelling whilst relieving pressure on your knees, hips and lower back. Reduced swelling leads to enhanced recovery and fewer complications.

Ergonomic Design

Ortholove® HomeFoam's sturdy and ergonomic design offers the optimum position of the foot, knee, and hip to ensure your comfort whilst relieving unwanted pressure on the calf. Reduced pressure on the calf may reduce the risk of blood clots and decreased swelling enhances wound healing.

Antibacterial & Breathable Covers

Every Ortholove® HomeFoam elevator comes with a removable, washable, breathable Air Layer® cover, which are made of durable, moisture-absorbing material designed to keep your leg cool, dry and comfortable as you recover.

Extra covers can be purchased separately.

Competitive Edge

Cheap imitations of the original Ortholove® HomeFoam are often too low, too soft, or too firm, to afford the advantages and benefits of the surgeon-recommended Ortholove® HomeFoam product.
